Clean water blocked across the country

Court suspends protections we helped win

For more than a decade, loopholes in the Clean Water Act left streams that flow into many of the waterways we love and rely on in Massachusetts and across the country vulnerable to pollution.

More than 800,000 of you took action with Environment Massachusetts to close these loopholes in the Clean Water Act—and President Obama’s Clean Water Rule, released in August, did just that, restoring protections to 2 million miles of streams and the drinking water sources for 1 in 3 Americans.

But now, the historic clean water protections that you helped win have been suspended nationwide, and could be overturned, due to lawsuits brought by polluters, with the support of more than 20 attorneys general across the country.

Polluters attack rule in court

Within hours of the Clean Water Rule’s September release, the Environmental Protection Agency (EPA) was hit with a flood of lawsuits from giant corporate polluters, who were joined, within weeks, by state attorney generals. In October, a U.S. Appeals Court suspended the rule nationwide, and may vote to overturn it.

“For more than a decade, the courts left thousands of our streams and wetlands in a precarious legal limbo, vulnerable to pollution and development,” said John Rumpler, senior attorney for Environment Massachusetts. “Now they’ve done it again.”

Your support helps us respond

We can’t allow our country to go backwards on clean water. So in 2016, we’re doubling down on our efforts to protect this critical rule.

With you behind us, Environment Massachusetts will urge attorneys general to intervene on the right side of the litigation. We’re also organizing legal scholars to speak up about the legal soundness of the Clean Water Rule. At the same time, we’re keeping the pressure on our leaders in Congress to beat back polluters’ attempts to pass legislation weakening the rule.

Most importantly, you’re helping us keep the debate focused on what this issue is really about: clean water for our families.

Algae blooms, like this one on Lake Erie, are worsened by runoff pollution in streams.

We need your help to move forward on clean water. Take action online to urge our attorneys general to stand up for the Clean Water Rule:

Recent action

We won! President Obama rejects Keystone XL

Your support won a monumental victory this November when President Obama rejected the construction of the Keystone XL pipeline—a pipeline designed to transport tar sands from Canada across the United States. Together, Environment Massachusetts and our members fought alongside our allies for years against this project, which State Department officials estimated would produce 26 million metric tons of carbon pollution each year—the equivalent of 5.7 million cars.

“The Keystone XL pipeline would slam the accelerator on global warming, so we’re thrilled that President Obama is applying the brakes,” said Anna Aurilio, director of our Global Warming Solutions program. “The victory belongs to all the Americans who have been fighting for years for their water, their communities, and their kids’ future, and it’s a crucial step toward the 100 percent clean energy future the climate crisis demands.”

You’re building support for action on climate

In Massachusetts, we’re seeing the effects of global warming firsthand, such as last winter’s record-breaking snowstorms. This fall, your support helped Environment Massachusetts continue our work to ensure the success of President Obama’s Clean Power Plan, which sets the first-ever limits on America’s largest source of global warming pollution—dirty power plants.

Unfortunately, the fossil fuel industry and their allies in Washington are determined to block this meaningful action. Environment Massachusetts is building support to defend the Clean Power Plan against attacks in Congress, while also working to ensure that Massachusetts remains a leader in the fight against global warming.

Under the state’s Global Warming Solutions Act, Massachusetts has committed to cut global warming pollution by 80 percent by 2050, but we are falling behind on this target. We’re calling on Gov. Charlie Baker’s administration to take advantage of solar and wind power and other technologies to reduce our emissions.

You make the difference

As a member of Environment Massachusetts, you’re helping us win tangible results for our environment. We all want the next generation to be able to enjoy the same great parks we treasure, clean air and water, and a safer world free from the threats of global warming.

That’s why in the face of discouraging setbacks in Washington, or opposition from powerful special interests, I’m counting on members like you, who share these values, to stand with us as we work for a greener future.

The advances we make for our environment are shaped by people like you who translate their hope for a better future into action and advocacy. So, even though at times the road feels riddled with obstacles, I feel hopeful. Together, we’re making strides on global warming, clean water and protecting the places we love by building people power and amplifying the call on our elected officials to be champions for our environment.

Thanks for standing with us.

Ben Hellerstein

Solar energy is booming across the country. In just the last three years, America’s solar photovoltaic capacity tripled, largely driven by just 10 states, according to recent research by Environment Massachusetts Research & Policy Center.

Yet, as solar grows and generates increasing amounts of clean energy at increasingly affordable prices, electric utilities, fossil fuel interests and powerful industry front groups have begun chipping away at the key policies that have put solar energy on the map in the United States—often in the face of strong objections from a supportive public.

**Leading states have strong policies**

Environment Massachusetts Research & Policy Center’s annual report “Lighting the Way,” released for the third time in September, found that solar’s recent and growing success is due not to the nation’s solar potential but rather to policies that have allowed increasing numbers of homeowners, businesses, communities and utilities to “go solar.”

Of the top 10 states in the report for solar capacity per capita—Massachusetts, Hawaii, Arizona, Nevada, California, New Jersey, New Mexico, Vermont, North Carolina and Colorado—all have renewable energy requirements and nine have net-metering laws that allow solar customers to connect to the electrical grid, or earn credit for excess electricity sent back to the grid. These 10 states are responsible for 86 percent of today’s solar electricity capacity.

**Special interests stand in the way**

The continued success of solar power, however, has been threatened by recent attacks on key solar policies. Environment Massachusetts Research & Policy Center’s report, “Blocking the Sun,” released in October, documented 12 fossil-fuel-backed groups and electric utilities that are running some of the most aggressive campaigns to slow the growth of solar energy in the United States.

In mid-2015, at least 21 states had either ongoing or recently resolved proceedings around policies to slow the growth of solar energy. In Massachusetts, utilities have played a large role in keeping restrictive caps on net metering, which has resulted in many businesses, local governments and nonprofits halting their plans to install solar, and has hurt the solar industry.

“By wide margins, Americans support pro-solar policies,” said Bret Fanshaw, Environment Massachusetts Research & Policy Center solar program coordinator. “That’s why fossil fuel interests have resorted to shady and deceptive tactics to undermine them. Ultimately, it’s up to state leaders to reject these attacks and support a clean energy future.”

State leaders can do more to encourage solar energy’s growth by embracing ambitious goals for solar energy and adopting policies that will help meet them.

“Rather than put the brakes on solar, we should bring as much solar to Massachusetts as we can, as quickly as possible,” said Environment Massachusetts Research & Policy Center Director Ben Hellerstein. “We hope Governor Baker, House Speaker Robert DeLeo, Senate President Stan Rosenberg, and other leaders will embrace big goals for solar and enact policies that will keep solar growing.”

How you can help save the bees

Millions of bees are dying off with alarming consequences for our environment and our food supply. We rely on bees to pollinate major crops, from almonds to strawberries to the alfalfa used to feed dairy cows. No bees means no food.

This fall, you helped Environment Massachusetts launch our grassroots efforts to protect our pollinators from this threat, making it possible for us to canvass on the street and go door-to-door to educate people about what’s at stake. Scientists point to several causes behind the die-off, including a class of pesticides known as neonicotinoids, which are toxic to bees. We need your continued help to convince the Environmental Protection Agency to declare a moratorium on bee-killing pesticides.

Please go to www.EnvironmentMassachusetts.org to learn more about how you can keep up the fight with us in 2016.
