

# **The 100% Clean Act**

100% clean electricity by 2035

100% clean heating and transportation by 2045

*An Act transitioning Massachusetts to clean electricity, heating, and transportation*

H.3288: Rep. Marjorie Decker, Rep. Sean Garballey

S.2136: Sen. Joseph Boncore

May 4, 2021

Dear legislators,

As environmental, public health, and civic organizations, we support the 100% Clean Act, filed by Rep. Marjorie Decker, Rep. Sean Garballey, and Sen. Joseph Boncore (H.3288, S. 2136).

Polluting sources of energy, like oil and gas, are harming our health and changing our climate in dangerous ways. Fortunately, we can power our electric grid, our buildings, and our transportation system with clean energy from sources like the sun and the wind.

When we achieve 100 percent clean energy, our families will be healthier and we'll help prevent the worst impacts of global warming. Increasing our reliance on local sources of renewable energy will also make our communities stronger and more resilient.

The 100% Clean Act will transition Massachusetts to 100 percent clean electricity by 2035 and 100 percent clean heating and transportation by 2045. It lays out clear requirements and actions for the Commonwealth to achieve these objectives, while ensuring that workers and environmental justice communities are included in the transition to clean energy.

Please support this important legislation to protect our health, our climate, and our children's future.

Sincerely,
